

NovoEd <> Zoom

Overview

- Enables course builders create zoom meetings directly on NovoEd.
- Enables direct update of zoom meetings from NovoEd.
- Pulls attendance and matches the data with enrollment roaster on NovoEd to award completion. Duration of attendance available account level.
- Pulls meeting recording automatically.

Two Options

User Level Oauth

- Zoom admin allows the [NovoEd Connector](#) zoom app to be installable by end users
- NovoEd Org Admin enables the option from Org Admin dashboard.
- Each course builder authenticates using their own zoom license and creates meetings on their own account. An alternate host can be added.

Considerations

User Level Oauth

pros:

- Smaller scope of permissions.
- Each course builder can only create events for themselves.

cons:

- Course builders are usually different group of users than the meeting hosts.
- Zoom only allows limited concurrent meetings (depending on license) on one user account. poses challenges at scale as a course builder needs to plan for and remember this restriction.
- 5 • Only participant attendance available, duration not available.

Account Level Oauth

pros:

- Course builders create the zoom events on the zoom account of the meeting host as a result double-booking or concurrency challenges do not happen.
- Participant attendance and duration available

cons:

- Larger scope of access provided.
